

helps reverse the signs of aging

Start seeing near-immediate results.

Nourish your skin with pure haven's exclusive non toxic skin care products with prebiotics and probiotics to help reverse the signs of aging, and fight the effects of pollution, extreme temperatures, and other environmental stressors on your skin. Enjoy near-immediate results that lead to a healthier, younger-looking complexion.

What can our skin care with prebiotic and probiotic ingredients do for you?

- Balance your skin's microbiome
- Reverse damage caused by toxic preservatives
- Help strengthen your skin's natural ability to defend itself
- Boost your skin's resistance to damage from environmental stressors
- Soothe and calm skin, reducing inflammation and redness
- Help reverse the signs of aging
- Reduce the effects of pollution and other everyday stressors
- Protect and nourish healthy skin
- Condition and hydrate, locking in moisture
- Maintain balance and provide a radiant glow

refresh eye cream with pre+probiotics

Refresh eye cream features a powerful combination of jasmine and hawthorn white flowers that rejuvenates the eye area. It helps combat dark circles and lift the upper eyelid, while our blend of green tea, pomegranate extracts, and caffeine helps to brighten skin and deflate puffiness around the eyes.

"I was struggling with dark bags under my eyes and feeling frustrated because I couldn't find anything that worked. Then I used pure haven refresh eye cream with pre+probiotics. It made a difference after just ONE application!"
— Emma H.

what you need to know about pure haven prebiotic and probiotic skin care

Where does our prebiotic come from?

Pure haven has specifically chosen a long chain inulin extracted from chicory roots and agave to hydrate skin.

How does the prebiotic work?

It counteracts the damaging effects of toxic preservatives on the skin. Prebiotics promote a more diverse array of good bacteria to help feed the probiotics and support the skin microbiome to reduce signs of aging.

Where does our probiotic come from?

Lactobacillus ferment lysate filtrate is derived from the probiotic bacteria *Lactobacillus bulgaricus*, a type of bacteria traditionally used to create yogurt.

How does the probiotic work?

It works with your skin's natural probiotic ecosystem, providing near-immediate results. Probiotics help skin remain in a balanced state, resulting in a complexion that's not too dry or too oily, and skin that can successfully repel the environmental conditions that cause inflammation.

What's a microbiome and why is it so important?

You've probably heard about the importance of good gut health, which refers to the good bacteria in your gut. That's your gut microbiome. Your skin microbiome, which is your skin's healthy bacteria, is just as important, protecting your skin from pathogens, damage, and dryness. Plus, it limits exposure to allergens and UV radiation, minimizes oxidative damage, aids in wound healing, maintains moisture, and can lead to more glowing, radiant, healthy skin.

How does your microbiome become compromised?

In addition to the effects of aging, pollution, and other environmental stressors, products containing toxic ingredients are destroying your skin's microbiome every day.

What is pure protect and why is it important to this skin care line?

Pure haven's proprietary pure protect broad spectrum preservation technology uses zero harmful chemicals to preserve our products. No other company is doing this. Even companies that use prebiotic and probiotic ingredients in their products often add toxic preservatives to prolong shelf life, which ruins all the good they may have tried to accomplish. Those toxic preservatives strip your skin's microbiome, leaving it susceptible to pathogens, damage, and dryness, and may be linked to serious health conditions.

Pure protect safely preserves our pre+probiotic skin care line, resulting in a truly non toxic product that you can trust. No compromises.
